

# **Construction & Design** – part of Boxon's service solutions

**Boxon Construction & Design is the ideal solution to produce the right packaging or label. When needs such as filling ratio, delivery reliability, traceability, information provision, etc. are crucial, or when design, colour and choice of material set the tone from a marketing perspective, a unique solution is the best alternative.**

External factors such as laws and industry rules are also considerations, which in many cases require unique competence in order to find the optimal solution.

**CONSTRUCTION & DESIGN**  
is available in the following markets:

## **Boxon Innovation Team**

The Boxon Innovation Team is a team with extensive experience in both the packaging industry and in the marking/label industry.

Our work method is simple – based on an idea or a need, our constructors and designers set to work to produce the best solution. We develop creative, brand-enhancing labels for a variety of businesses. The labels are produced in an optimal, efficient way using cutting-edge printing technology.

### **NOTE**

Boxon does not rely on specific materials, but seeks out the right solution with no restrictions on materials.

### **BENEFITS OF CONSTRUCTION & DESIGN**

- A unique solution to meet your needs.
- Solution produced by specialists and packaging technicians with extensive experience.
- Whatever the base data, drawing or available product, a unique solution is created.
- Boxon also offers samples to guarantee construction and design.
- Boxon maintains full control over packaging drawings, labels and base data for printing.
- If necessary, we work with 3D printers to deliver an optimal solution.

## Adding value to our product solutions

We offer a number of services, which have been developed over the years to meet our customers' needs and preferences, and our primary goal is to make everyday life easier and more efficient for our customers. This can involve anything from freeing up warehouse space to managing the entire label and marking flow globally, and most things in between in a packaging process.

Our service portfolio adds value to the product solutions chosen by our customers and makes additional improvements to customers' business processes. This is how we intend to build a long-term, secure partnership with our customers.

*We identify challenges and add value with our products, services and employees.*

WAREHOUSING	CONSTRUCTION & DESIGN	PACKING INSTRUCTIONS	GLOBAL LABEL SYSTEM	SOFTWARE SUPPORT
Keeping items in stock costs money. A lot of money. Of all the value tied up at manufacturing companies, packaging material accounts for a significant proportion and also allocates unnecessary warehouse space from the core business.	Standard solutions go a long way. Unique solutions go even further and create value. Demand for customized packaging solutions and labels is increasing. Costs are reduced through optimal solutions. The trend is clear, the reasons many.	Packing smartly and correctly might seem self-evident, although it's sometimes easier said than done. Making sure that everyone packs correctly and in the same way ensures a manageable, efficient packing flow.	Our cloud-based order system Tracy enables us to work together with our customers to design a totally automated label management solution that enhances the value of the packaging flow from order to delivery.	Things just have to work. That's just the way it is. But sometimes complications arise, and then it's good to have a helping hand close by. Someone who knows and who can resolve the problem quickly and easily.
EDI INTEGRATION	STRETCH FILM TEST	MACHINE SERVICE	INSTALLATION & CONFIGURATION	SYSTEM & MACHINE EDUCATION
Our systems are currently being used more and more to maintain good control over activities and processes. At the same time, manual, cost-intensive tasks that can easily be digitalised are being reduced.	Film and machine must work in harmony for the best results. This also means reduced environmental impact and lower consumption into the bargain. That's what you might call a real win/win situation.	Downtime costs money. The best way to avoid it is to prevent it. Regular, scheduled service minimises unnecessary and expensive operational disruption.	Sometimes it's a bit more complicated than putting a plug into a socket. Then it can be good to know that professional technicians are taking care of the installation. And configuring the settings properly from the outset.	With competent, trained employees, you guarantee the right work method and efficient processes. It is both a necessity and self-evident that everyone should be able to perform their work safely and correctly.
