

Boxon enters into an agreement with Öresundskraft to offset climate emissions.

Boxon is proud to announce that we have signed an intentional agreement with Öresundskraft for the purchase of negative emission certificates. This means that we can compensate for climate emissions that are difficult to remove in other ways.

Öresundskraft wants to sequester carbon dioxide from the Filbornaverket plant in Helsingborg, so-called CCS.

The goal is to remove about 210,000 tonnes of fossil and biogenic carbon dioxide, which would enable them to offer district heating free from carbon dioxide, as well as negative emissions.

The use of negative emissions can compensate for climate emissions that are difficult to eliminate in other ways.

- *Boxon has signed an intentional agreement with Öresundskraft for the annual purchase of 1,000 tonnes of negative CO2 equivalents. "We have done this as we consider CCS to be a complement to other emission-reducing initiatives, such as energy efficiency improvements and reduced use of fossil energy", says Ann-Sofie Gunnarsson, Head of Sustainability at Boxon. She adds:*
- *"We have an ambitious sustainability agenda and, through close collaboration with Öresundskraft, we can contribute to achieving the climate goals in Helsingborg, Sweden, and internationally."*

With an allotment of around SEK 70 million, Öresundskraft is working to produce a basis for a decision on the investment in a complete CCS plant at Filbornaverket plant. A decision will

be made in 2025. They are also investigating various transport and logistical solutions for captured carbon dioxide within the Carbon Network South Sweden network, which consists of around ten companies in Southern Sweden.

- "The intentional agreement with Boxon is one of many that shows that our customers share our conviction that we can achieve our climate goals if we work together to separate carbon dioxide from our emissions. The broad support for our initiative is very pleasing, and we welcome more people to join this journey towards net zero," says Soraya Axelsson, Commercial Manager for CCS at Öresundskraft.

About Boxon

Thanks to our extensive expertise and experience, we can guarantee our customers sustainable and innovative solutions within packaging and wrapping. We offer everything from simple standard boxes to automated packing machines. With the help of in-house designers, we are able to develop special solutions for packaging, as well as design labels according to your wishes.
